## Reporting Aggregated Data Using the Group Functions

# Objectives

**After completing this lesson, you should be able to do the following:**

- **Identify the available group functions**
- **Describe the use of group functions**
- **Group data by using the GROUP BY clause**
- **Include or exclude grouped rows by using the HAVING clause**

# What Are Group Functions?

Group functions operate on sets of rows to give one result per group.

# Types of Group Functions

- **AVG**
- **COUNT**
- **MAX**
- **MIN**
- **STDDEV**
- **SUM**
- **VARIANCE**

# Group Functions: Syntax

```
SELECT      [column,] group_function(column), ...  
FROM        table  
[WHERE      condition]  
[GROUP BY  column]  
[ORDER BY  column];
```

# Using the AVG and SUM Functions

You can use AVG and SUM for numeric data.

```
SELECT AVG(salary), MAX(salary),  
       MIN(salary), SUM(salary)  
FROM   employees  
WHERE  job_id LIKE '%REP%';
```

AVG(SALARY)	MAX(SALARY)	MIN(SALARY)	SUM(SALARY)
8150	11000	6000	32600

# Using the MIN and MAX Functions

You can use MIN and MAX for numeric, character, and date data types.

```
SELECT MIN(hire_date), MAX(hire_date)
FROM employees;
```

MIN(HIRE_	MAX(HIRE_
17-JUN-87	29-JAN-00

# Using the COUNT Function

**COUNT (\*) returns the number of rows in a table:**

1

```
SELECT COUNT (*)  
FROM employees  
WHERE department_id = 50;
```

COUNT(*)
5

**COUNT (expr) returns the number of rows with non-null values for the expr:**

2

```
SELECT COUNT (commission_pct)  
FROM employees  
WHERE department_id = 80;
```

COUNT(COMMISSION_PCT)
3

# Using the DISTINCT Keyword

- **COUNT (DISTINCT expr)** returns the number of distinct non-null values of the *expr*.
- To display the number of distinct department values in the **EMPLOYEES** table:

```
SELECT COUNT(DISTINCT department_id)
FROM employees;
```

COUNT(DISTINCTDEPARTMENT_ID)
7

# Group Functions and Null Values

Group functions ignore null values in the column:

1

```
SELECT AVG(commission_pct)
FROM employees;
```

AVG(COMMISSION_PCT)
.2125

The NVL function forces group functions to include null values:

2

```
SELECT AVG(NVL(commission_pct, 0))
FROM employees;
```

AVG(NVL(COMMISSION_PCT,0))
.0425

# Creating Groups of Data: GROUP BY Clause Syntax

```
SELECT    column, group_function(column)
FROM      table
[WHERE    condition]
[GROUP BY group_by_expression]
[ORDER BY column];
```

You can divide rows in a table into smaller groups by using the GROUP BY clause.

# Using the GROUP BY Clause

All columns in the SELECT list that are not in group functions must be in the GROUP BY clause.

```
SELECT department_id, AVG(salary)
FROM employees
GROUP BY department_id ;
```

DEPARTMENT_ID	AVG(SALARY)
10	4400
20	9500

# Using the GROUP BY Clause

```
SELECT  AVG(salary)
FROM    employees
GROUP BY department_id ;

# Illegal Queries Using Group Functions

Any column or expression in the **SELECT** list that is not an aggregate function must be in the **GROUP BY** clause:

```
SELECT department_id, COUNT(last_name)
FROM   employees;
```

```
SELECT department_id, COUNT(last_name)
      *
ERROR at line 1:
ORA-00937: not a single-group group function
```

**Column missing in the GROUP BY clause**

# Illegal Queries Using Group Functions

- You cannot use the **WHERE** clause to restrict groups.
- You use the **HAVING** clause to restrict groups.
- You cannot use group functions in the **WHERE** clause.

```
SELECT  department_id, AVG(salary)
FROM    employees
WHERE   AVG(salary) > 8000
GROUP BY department_id;
```

```
WHERE  AVG(salary) > 8000
      *
ERROR at line 3:
ORA-00934: group function is not allowed here
```

**Cannot use the **WHERE** clause to restrict groups**

# Restricting Group Results with the HAVING Clause

When you use the **HAVING** clause, the Oracle server restricts groups as follows:

1. Rows are grouped.
2. The group function is applied.
3. Groups matching the **HAVING** clause are displayed.

```
SELECT      column, group_function
FROM        table
[WHERE      condition]
[GROUP BY  group_by_expression]
[HAVING    group_condition]
[ORDER BY  column];
```

# Using the HAVING Clause

```
SELECT  department_id, MAX(salary)
FROM    employees
GROUP BY department_id
HAVING  MAX(salary) > 10000 ;
```

DEPARTMENT_ID	MAX(SALARY)
20	13000
80	11000
90	24000
110	12000

# Using the HAVING Clause

```
SELECT  job_id, SUM(salary) PAYROLL
FROM    employees
WHERE   job_id NOT LIKE '%REP%'
GROUP BY job_id
HAVING  SUM(salary) > 13000
ORDER BY SUM(salary);
```

# Nesting Group Functions

Display the maximum average salary:

```
SELECT MAX (AVG (salary))  
FROM employees  
GROUP BY department_id;
```

MAX(AVG(SALARY))
19333.3333

# Summary

In this lesson, you should have learned how to:

- Use the group functions COUNT, MAX, MIN, and AVG
- Write queries that use the GROUP BY clause
- Write queries that use the HAVING clause

```
SELECT    column, group_function
FROM      table
[WHERE    condition]
[GROUP BY group_by_expression]
[HAVING   group_condition]
[ORDER BY column];
```
